static join pattern — it is not derived from real fraud history and, as expected, shows no meaningful correlation with actual fraud rate. In a production system, this field would be populated by a real compliance/risk-scoring process (e.g. historical chargeback data, sanctions screening), and would be expected to correlate meaningfully with fraud outcomes. The transaction amount and velocity signals shown below, by contrast, are derived from real dataset patterns and show strong, validated correlation with actual fraud.

Fraud Rate By Detection Signal Combination				Recall % 66.36
HIGH_AMOUNT_FLAG	Total Transactions	Total Fraud (Actual)	Fraud Rate %	
1.00	6300	567.00	9.00	
0.00	124760	200.00	0.16	
Total	131060	767.00	0.59
